No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                 Sequence 46, Application US/09543608A

Sequence 46, Application US/09543608A

Patent No. 6602510

GENERAL INFORMATION:

APPLICANT: Fikes, John D.

APPLICANT: Sette, John D.

APPLICANT: Southwood, Scott

APPLICANT: Southwood, Scott

APPLICANT: Cells, Esteban

APPLICANT: Keogh, Elissa A.

APPLICANT: Epimmune Inc.

TITLE OF INVENTION: HLA Class I A2 Tumor Associated Antigen

TITLE OF INVENTION: Peptides and Vaccine Compositions

FILE REFERENCE: 018623-012710US

CURRENT APPLICATION NUMBER: US/09/543,608A

CURRENT FILING DATE: 2002-04-05

NUMBER OF SEQ ID NOS: 52

SOFTWARE: FSELED for Windows Version 3.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 16, Application US/08331454

Patent No. 596614

GENERAL INFORMATION:
APPLICANT: Johnson, Howard M.
APPLICANT: Yeares, Barbara A.
APPLICANT: Yearencto, Janet K.
ITLE OF INVENTION: Retroviral Superantigens, Superantigen
ITILE OF INVENTION: Peptides, and Methods of Use
NUMBER OF SEQUENCES: 20
CORRESPONDENCE ADDRESS:
ADDRESSEE: Saliwanchik & Saliwanchik
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              81.2%; Score 39; DB 1; Length 38; 88.9%; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           clones.";
DNA Res. 7:31-63(2000).
-!- FUNCTION: This polymerase possesses two enzymatic activities: DNA synthesis (polymerase) and an exonucleolytic activity that degrades single stranded DNA in the 3' to 5' direction.
-!- CATALYHIC ACTIVITY: N deoxynucleoside triphosphate = N diphosphate + {DNA}(N).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "Structural analysis of Arabidopsis thaliana chromosome 5. The 125 kDa subunit contains the polymerase active site and most likely the active site for the 3'-5' exonuclease activity (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               similarity).
SUBCELULAR LOCATION: Nuclear.
SUBCELLULAR LOCATION: Nuclear.
MISCELLANBOUS: In eukaryotes there are five DNA polymerases:
alpha, beta, gamma, delta, and epsilon which are responsible for
different reactions of DNA synthesis.
SIMILARITY: Belongs to the DNA polymerase type-B family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gарв
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16-OCT-2001 (Rel. 40, Created)

The 125 kDa subunit contains the polymerase active site and most likely the active for the 3'-5' exonuclease activity.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- MISCELLANEOUS: In eukaryotes there are five DNA polymerases: alpha, beta, gamma, delta, and epsilon which are responsible for different reactions of DNA synthesis.
-!- SIMILARITY: Belongs to the DNA polymerase type-B family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PERM: PR00136; DNA POL B; 1.

Sequence 2, Application US/09836503B
Patent No. 6696415
Fatent No. 6696415
GENERAL INFORMATION:
APPLICANT: Children's Hospital Research Foundation
APPLICANT: Gendron, Robert L.
APPLICANT: Paradis, Helene
TITLE OF INVENTION: Treatment of Ocular Neovascularization and Related Diseases;
FILE REFERENCE: 10872/518
CURRENT PFLICATION NUMBER: US/09/816,503B
CURRENT PFLING DATE: 2001-04-17
FRIOR APPLICATION NUMBER: US 60/197,977
FRIOR APPLICATION NUMBER: US 60/197,977
NUMBER OF SEQ ID NOS: 6
SOFTWARE: PatentIn version 3.1
                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 APPLICANT: Homburger et al.

Patent No. 6440674

GENERAL INFORMATION:

APPLICANT: Mistar, Santosh et al.

TITLE OF INVENTION: PLANT PROMOTER DERIVED FROM LUMINAL BINDING PROTEIN GENE AND METH

TITLE OF INVENTION: 1TS USE

TITLE OF INVENTION: 08-04

CURRENT APPLICATION NUMBER: US/09/632,538C

CURRENT APPLICATION NUMBER: US/09/632,538C

CURRENT PILING DATE: 2000-08-04

SOFTWARE: PATENTIN Ver. 2.1

SEQ ID NO 36

LENGTH. 655
                                                                                                                                                                                                                                         Sequence 8079, Application US/09328352

Patent No. 6562958

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT PILING DATE: 1999-06-04
NUMBER: OF SEQ ID NOS: 8252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GENERAL INFORMATION:

US-09-836-503B-5

Sequence 5, Application US/09836503B

Patent No. 6696415

GENERAL INFORMATION:

APPLICANT: Children's Hospital Research Foundation

APPLICANT: Gendron, Robert L.

APPLICANT: Paradis, Helene

TITLE OF INVENTION: Treatment of Ocular Neovascularization and Related Diseases

FILE REFERENCE: 1082/2518

CURRENT FILING DATE: 2001-04-17

PRIOR APPLICATION NUMBER: US 60/197,977

PRIOR PLING DATE: 2000-04-17

NUMBER OF SEQ ID NOS: 6

SOFTWARE: Patentin version 3.1
